

Vue Composition API - Workshop

This application is created as a workshop for the [VueJS Course](#) @ [Software University](#)

Task Requirements

This workshop will give you opportunity to **rework** parts of your **existing** application from using the Options API to using **Composition API**. Any previous features that are missing can be addressed here too and to be implemented from the start with Composition API.

Think about how you can implement the features of Composition API and more precisely:

- ✓ Using `<script setup>`
- ✓ Using reactivity like `ref()` & `reactive()`
- ✓ Creating Components
- ✓ Passing data TO and FROM component
- ✓ Computed properties
- ✓ Vue Router, Pinia and Vuelidate syntax changes
